TORSION VISCOMETER GALLENKAMP

DESCRIPTION

Developed with the Ceramic Industry in mind, (but easily modified for other use), the Torsion Wire Viscometer is simple to use and maintain. The machine has three levelling points for easy adjustment, a PTFE bearing and a unique sample table which is raised vertically or rotated horizontally into position. All accessories are fitted and adjustments easily made by means of the "brass thumb screws". This principle removes the need for fiddly screwdrivers or allen keys. The standard model is supplied with a 30swg torsion wire, an 11/16" cylinder bob and a stainless steel sample cup.
