

CODE GT0677
OVERALL DIMENSION. 240x60x34 mm
WEIGHT 400 gr

PENETROMETER FOR CLAYS CP

DESCRIPTION

Portable, economy and fast instruments for the determination of the hardness of clays:

- Extruded (for bricks, roof tiles, "cotto" tiles, etc)
- Pats of clay (for hobby, artistic, table dinnerware, sanitary ware, etc).

The operation principle is based on the contrast force to penetration made by the sample material on the instrument calibrated spring. The instrument drill is pressed on the material till reaching the supporting base

TECHNICAL SPECIFICATIONS

Made all stainless steel AISI-304

Two graduated scale:

- 1) 0 ÷ 20 as relevant reference parameter for hardness
- 2) Grams of applied force
