

## VICAT INSTRUMENT

## STANDARDS

EN 13279-2 (GYPSUM), EN 480-2, ASTM C191, AASHTO T131, NF P15-414, NF P15-431, EN 196-3

## DESCRIPTION

Vicat's test is used to determine the amount of water required to produce a standard consistency cement paste and the setting time. The instrument consists of a metal frame, graduated scale with index, 300 g sliding probe, $\varnothing 10 \mathrm{~mm}$ consistency piston, glass base plate. The test procedure consists of a needle / probe that freely falls into a concrete sample at regular intervals and in fixed positions, the depth of penetration being measured.

## TECHNICAL SPECIFICATIONS

The instrument consists of a metal frame, graduated scale with index, 300 g sliding probe, $\varnothing 10 \mathrm{~mm}$ consistency piston, glass base plate. Needle and mold must be ordered separately according to the selected Standard.

EN / ASTM EQUIPMENT (to be ordered separately):

- Needle, hardened Ø 1.13 mm EN 196-3: 2005
- Needle, hardened Ø 1 mm ASTM - AASHTO
- Conical plastic mold Ø $\emptyset 0 / 80 \mathrm{~h} 40 \mathrm{~mm}$ (EN - NF)
- Conical plastic mold $\emptyset 60 / 70 \mathrm{~h} 40 \mathrm{~mm}$ (ASTM - AASHTO)

BS / DIN / UNI EQUIPMENT (to be ordered separately):

- Conical plastic mold Ø 80/90 h 40 mm (UNI)
- Conical plastic mold Ø $65 / 75 \mathrm{~h} 40 \mathrm{~mm}$ (DIN)
- Conical plastic mold Ø $\varnothing$ 80/90 h 40 mm (BS)
